

FLY-BYE™ Floor Drain Trap Seal for virtually maintenance free drains.

Cockroaches, fruit flies, odors and gases are all undesirables that can plague your floor drain.

Bar Maid's FLY-BYE Floor Drain Trap Seal is a patented one-way valve that allows water and solids to flow down the drain, while preventing odors, sewer gases and insects such as fruit flies and cockroaches from entering up through the floor drain grate.

With a durable one way silicone valve, the economical FLY-BYE Floor Drain Trap Seal:

- Installs quickly and easily in minutes
- Makes drains virtually maintenance free
- Stops fruit flies and cockroaches from escaping
- Keeps bacteria, nasty smells and gases in the drain
- Stops the need for adding primers and fresh water
- Does not impede flow rate
- Pesticide-free
- Patented 3-part design allows fluid to flow down, but nothing to come back up

Available in four sizes to fit most drains!

Fruit flies, cockroaches and other insects are not just a nuisance... they are a major sanitation issue for bars and restaurants. This floor drain trap seal joins our FLY-BYE line of products that give the restaurant and bar industry effective tools to combat these pests.

Fruit flies and many other insects feed and breed in floor drains, thriving in that damp environment where organic residues build up and act as an attractant. Bacteria and viruses also flourish in the slimy biofilm of damp drains. Insects that crawl out of the drain into the living or workspace may be couriers of those pathogens. The FLY-BYE Floor Drain Trap Seal prevents insect infiltration and the potentially fatal cross contamination and infection spread possible from unprotected drains.

The reversing airflow of unprotected floor drains can also pose a health hazard, allowing the aerosolization of pathogens and migration of not only foul odors, but also harmful and potentially flammable gases out of the drain. The FLY-BYE Floor Drain Trap Seal acts as a vapor barrier to help prevent gases such as methane, hydrogen sulfide and radon from infiltrating the living or workspace, improving indoor air quality.

Specifications:

- Model FB-TS20: 2" Drains
 - Model FB-TS30: 3" Drains
 - Model FB-TS35: 3.5" Drains
 - Model FB-TS40: 4" Drains
- Approvals by:

**Outer
Anchoring**

**High Quality
ABS Housing**

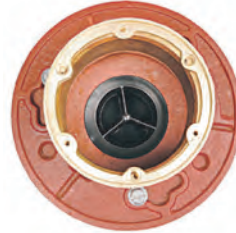

Silicone Skirt

How the FLY-BYE Floor Drain Trap Seal works:

The FLY-BYE Floor Drain Trap Seal is quickly and easily installed in the outlet connection of the floor drain body, or inside the top of a floor drain strainer.

Bottom of Body

Top of Strainer

The patented 3-part design opens to allow drainage and closes when there is no water flow.

The outer anchor has four flexible silicone ribs that seal the unit inside the drain and ensure easy installation into openings that may have variations in size. Liquids and solids pass through the inside of the durable, UV resistant ABS plastic housing, where the flexible silicone skirt opens to allow them down the drain. The silicone skirt then closes to achieve a seal that locks out pests, gases and liquids.

Tested and certified to the ASSE 1072 Standard and listed with IAPMO and I.C.C. For use in either new construction or retrofit applications where trap primers were never installed.

This product is covered by one or more U.S., Canada and foreign patents, including U.S. Patent No. 7900288 and 9027172
