

Better ice starts with better filtration.

When it comes to making fresh-tasting ice, there's no substitute for clean water and optimal machine sanitation. That's why Scotsman offers the powerful AquaDefense® system — a multimethod approach that protects your ice machine from undesirable microbes, bacteria, mold and algae. Using advanced defensive means, the components of the AquaDefense® system work together to ensure consistently sanitary conditions throughout your Scotsman unit.

AquaPatrol® Plus— Filtration optimized for your Scotsman unit.

From reducing dirt and rust particles to inhibiting mineral buildup, Scotsman's AquaPatrol® Plus filtration system ensures the highest levels of sanitation for your ice machine. Thanks to its unique design, AquaPatrol® Plus leaves chlorine in the water initially, then removes it during the ice-making process itself — keeping the machine clean longer while helping provide fresh, odor-free ice. The latest design features even better filtration capabilities and a smaller footprint.

AquaBullet® — Protecting your cube ice machine around the clock.

Combining the power of key minerals including metal oxides, Scotsman's AquaBullet® system is specifically designed to provide one-step drop-in treatment for sump water. Its custom EPA-registered media interferes with the cell replication of microorganisms, inhibiting the growth of a variety of mold, bacteria and algae that can cause slime.

AquaArmor™ — Built-in protection for lasting coverage.

Using the antimicrobial properties of silver, Scotsman's built-in AquaArmor™ protection is molded directly into critical ice machine components. It's progressive inorganic AgION® compound helps prevent the growth of unwanted microorganisms and is effective for the life of the machine.

SSM Plus by Everpure® — Extend the life of your machine.

With studies showing filtration can reduce unscheduled water-related maintenance calls by as much as 40%, it's essential to have a reliable solution you can count on. Our SSM Plus water filtration systems by Everpure® contain the antimicrobial power of AgION® and feature ultrafine half-micron construction and food-grade polyphosphate.
