

accucold COPPER HANDLE OPTIONS

KEEP YOUR FACILITY SAFER WITH ANTIMICROBIAL PURE COPPER HANDLES

In the wake of COVID-19, ensuring clean and sanitary medical facilities has never been more vital to keeping clinical staff, patients, and visitors safe. One of the simplest methods for safeguarding – and ensuring a cleaner facility – is adding copper handles to medical equipment. Copper ions naturally kill microbes in a shorter time frame than other metals, helping to lessen microbe transfer, as well providing a durable, stylish finish to your refrigeration needs. Accucold's copper handle option is now available on a range of medical, scientific, and general purpose healthcare storage solutions.

Exterior Finishes in white, black, stainless steel, or glass doors

Small and Large Capacities from 1.4 to 21 cu.ft. for optimal storage

ADA Compliant Choices for installation under lower counters

Added Features on select units include keyed or keyless locks, NIST calibrated temperature loggers and alarms, interior lockboxes, & more
