Stabilize & Align Your **Existing** Tables with FLAT® Equalizers

- ✓ **Stabilize** tables with a press of the table top
- ✓ Internal locks provide **unrivalled stability**
- ✓ Enable the **alignment** of table tops
- ✓ **Built to last!** Independently tested by FIRA
- ✓ **Exceed International Standards** (BS EN 581-1&3:2017)
- ✓ **Install in seconds.** No tools required
- ✓ **Save you time, money and frustration**
- ✓ **Award-winning Hydraulic Stabilization Technology**

We know how difficult it can be to create a 'great' dining experience; so here at FLAT we've developed our ground breaking FLAT Equalizers.

FLAT Equalizers allow operators to **stabilize tables with just a press of the table top**. Equalizers adjust up to 1/4" (6mm) and lock in place to stabilize the table.

Users can also take advantage of FLAT's unique table **alignment capabilities**.

By tilting or lifting the table top in the direction of the adjoining top, the feet adjust, helping to create an aligned surface.

FLAT Equalizers are made from the most robust materials to protect against impact and corrosion. They **exceed international standards for stability, strength, durability and safety** (BS EN 581-1:2006 & BS EN 581-3:2017).

The reinforced plastic foot, houses a stainless steel thread which comes in a variety of sizes (metric and UNC) to fit almost any table with existing screw-in feet. The thread compresses into the foot activating the hydraulic stabilization technology within.

To install Equalizers simply **remove the existing feet** from your tables and replace them with Equalizers of the same thread size. **Use our thread guide below if you are unsure of your thread size.** Place your foot's thread over the images to determine its size.

How Equalizers Work

1. Replace All Feet

2. Stabilize & Lock

3. Align Table Tops

UNC (Imperial) Thread Sizes

(Generally used in the USA)

1/4"-20

Most common size in the USA

5/16"-18

3/8"-16
