

# THEATER POP 12/16 KETTLE INSTALLATION

Figure 1: Hang kettle and attach gas spring.

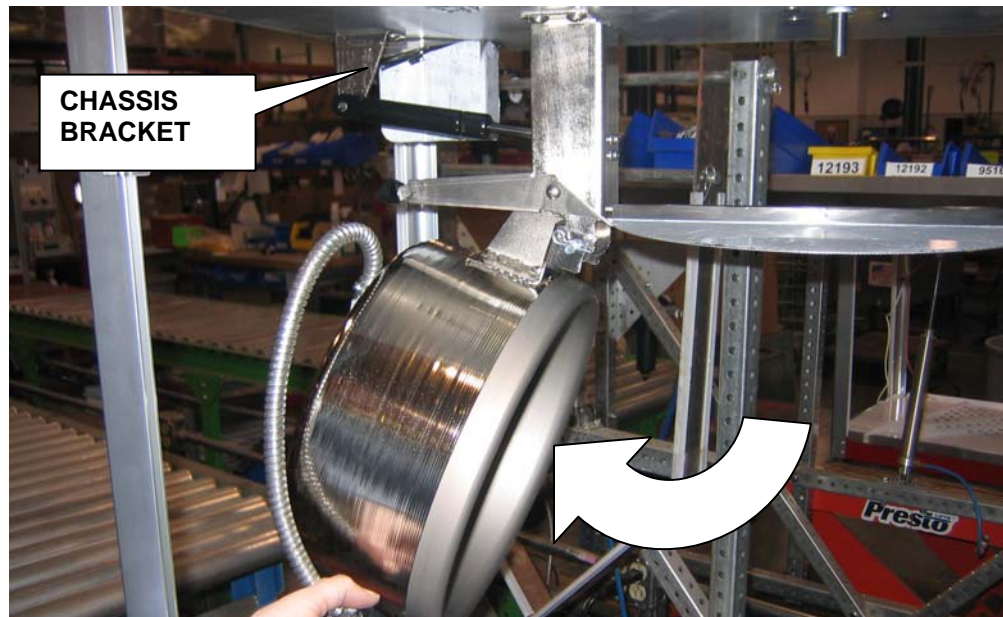

Figure 2: Swing kettle and attach gas spring.

## Kettle Installation:

1. Hang kettle on left kettle hanging bracket with pin and clip.
2. Attach gas spring to kettle bracket with rod end towards kettle. See Figure 1.
3. Holding on to the kettle handle, carefully swing kettle fully open.
4. Attach other end of gas spring to chassis bracket. See Figure 2.

Remember to never immerse kettle in water. This is an electrical appliance similar to an electric skillet.

Keeping your kettle clean will prolong its life, provide better tasting popcorn and allow the stirrer to work properly.

Before cleaning, disconnect your popcorn machine from power and allow the kettle to cool completely. This may take 15-30 minutes.
